PROPOSAL 1: M&P CUSTOMS

1. Organisation Overview

1.1 Name

M&P Customs

1.2 Brief History

This company has been created to solve a huge problem many face: the price of equipment and the lack of skills such as CAD design. This company specialises in 3D printing, CNC works, and metal 3D printing using the same metal 3D printing technology used in Formula 1. This site caters for all, experienced and inexperienced, and we are willing to make your ideas come to life.

1.3 Mission Statement

We are willing to make your ideas and files come to life, from household use to gardening and car use.

1.4 Vision Statement

Making insane technology available to the average consumer — making the unobtainable, obtainable.

1.5 Target Audience

The target audience for this is literally anyone, because anyone with an idea can come to us — mechanics, car enthusiasts, hobbyists, and DIYers. For example, someone wanting a new plastic piece for a pot, or a motorhead wanting a weldless turbo manifold for their car. Anyone is welcome here.

2. Website Goals and Objectives

Goal 1

The website needs to be informative due to our large range of services. People need fast access to any of the services we provide to reduce bounce rate and increase user interest. This can be

done by highlighting our key services at the start, with directions to move them to the relevant page once they find the service they want.

Goal 2

Increase the enquiries left by users/customers, by using smart marketing tactics such as hook words — fast shipping, response to enquiry within 2 days, competitive pricing, and price matching guarantees. This makes the user more likely to leave a reply.

KPIs

- Bounce rate — expected to decrease as users find relevant services faster
- ROI (Return on Investment) — more enquiries left leads to more sales, increasing revenue
- Visitors / website traffic — increased engagement and enquiries can also boost search engine ranking (SEO), further increasing traffic

3. Current Website Analysis

M&P Customs is a new company that does not currently have a website and would like to increase customer awareness and increase sales.

4. Proposed Website Features and Functionality

- Contact form (contact.html)
- Enquiry form (enquiry.html)
- Embedded map on the Contact page (showing more than one location)
- Quick-access icons: WhatsApp, email, and map redirect
- Top navigation bar for desktop, collapsing into a burger/hamburger menu on mobile and tablet breakpoints
- Hero banner on the homepage showcasing past work (CNC parts, 3D printed parts, welding projects)
- FAQ / commonly asked questions section on the About Us page, providing general information about the company and answers to common queries

5. Design and User Experience

5.1 Colour Palette

Colour	Hex Code	Use
Primary	#808080	Filled buttons, active states, links, app header
Secondary	#AEA3A3	Section labels, borders, dividers, outline buttons
Accent	#2F99C6	One focal element per screen — hero CTA, key stat, badge
Background	#D9D9D9	Main page background fill (light grey, #F3F2F2 on white screens)
Surface	#FAFAFA	Cards, modals, list containers, drawers
Error	#B62034	Error text, error borders, destructive actions
Success	#268733	Confirmations, positive states, success messages
Warning	#D18A10	Caution states, pending actions, advisory text

Table 1: M&P Customs colour palette (generated using Sookha's Colour Scheme Generator, 2026)

A simplistic, industrial colour palette was chosen — greys, muted tones, and a steel-blue accent — to reflect the CNC, welding, and metal fabrication nature of the business, rather than bright colours.

5.2 Typography

Montserrat — a clean, simple sans-serif font was chosen to keep the design uncomplicated and modern.

M&P Customs — This is how Montserrat looks (sample text in the chosen font)

5.3 Layout and Design Approach

A top navigation bar will be used on desktop, giving direct access to all five pages (Home, About, Services, Enquiry, Contact). On mobile and tablet breakpoints, this collapses into a burger/hamburger menu, following standard responsive design practice. The homepage features a hero banner showcasing images of past work — CNC parts, 3D printed parts, and welding projects.

5.4 User Experience Considerations

- The hero banner builds instant credibility by showing real examples of completed work
- Clear navigation makes it easy to reach the Enquiry and Contact pages from anywhere on the site
- Fast loading speed (site should load within 3 seconds) to avoid an increase in bounce rate

6. Technical Requirements

- Domain registration: GoDaddy — proposed domain: www.m-p-customs.co.za

- Hosting: Cloudflare
- Development editor: Visual Studio Code (VS Code)
- Languages: HTML, CSS, JavaScript

7. Timeline and Milestones

- Week 1–2: Proposal approved, planning and HTML structure completed (Part 1)
- Week 3–6: CSS styling and responsive design completed (Part 2)
- Week 7–10: JavaScript functionality, SEO, and forms completed; website deployed (Part 3)
- Week 11–12: Testing, refinement, and final launch

8. Budget

Website design pricing is typically categorised by website type (New Perspective Design, 2026).

A small-business website starts from R3,490, suited to service businesses such as M&P Customs; given the site's added complexity (contact/enquiry forms, embedded map, image gallery), the budget allows for this to move up towards the lead-generation website category (from R8,590), as the site's core objective is converting visitors into enquiries.

- Development (once-off): R5,000 – R9,000 (New Perspective Design, 2026)
- Domain registration (.co.za, annual): R89 – R150 per year (LaunchLlama, 2026)
- Hosting: Cloudflare — free tier
- Maintenance (monthly): R1,799 per month — Standard Basic Plan (Comfort Digital, 2026)

9. Low-Fidelity Wireframes

The following wireframes were created using Figma and represent the rough layout and information hierarchy of two key pages, without final colours, imagery, or styling.

Figure 1: Low-fidelity wireframe — Homepage (M&P Customs, created in Figma)

Figure 2: Low-fidelity wireframe — About Us page (M&P Customs, created in Figma)

10. References — M&P Customs

PROPOSAL 2: DAILY DIET

1. Organisation Overview

1.1 Name

Daily Diet

1.2 Brief History

This site has been created to solve a huge problem in today's society: weight and time. Finding recipes and meticulously looking for all the ingredients is a hassle, and we make it easy. Depending on what you want, we provide a range of services — from 3x daily meals with a shopping list and clear instructions on what to get and what to look for, to weekly meal prep for the gym-goers, to in-house meals that you can customise to your needs, ready to ship.

1.3 Mission Statement

Our mission is to provide daily recipes for you depending on what you want — from healthy meals to weekly meal prep, we've got you covered.

1.4 Vision Statement

Creating a world where you can eat healthy without doing a lot of research.

1.5 Target Audience

All people can use this service, but it is mainly marketed towards younger people, people who exercise, people who don't know how to make healthy food, and people who do not have time to look for recipes but need the nutrition.

2. Website Goals and Objectives

Goal

Hook visitors into subscribing to a meal plan through incentives (a 10% first-month discount for new members), a prominent enquiry/contact call-to-action for more information, and social proof (a customer review section) that build trust and keep visitors engaged and focused on the website.

KPIs

- ROI (Return on Investment) — measured by subscription sign-ups and conversion rate
- Bounce rate — expected to decrease as visitors stay engaged with reviews and content rather than leaving quickly
- Visitors / website traffic — increased engagement and reputation boost search engine ranking, moving the site closer to the top of search results and increasing subscriptions

3. Current Website Analysis

This is a new business that does not currently have a website, and needs one as the main place to interact with the business and find out more about the business.

4. Proposed Website Features and Functionality

- Account login/registration
- Payment / subscription plans page explaining how payment works and the plan options available
- 3x daily meals with an accompanying shopping list and clear instructions on what to get and what to look for
- Weekly meal prep plans, aimed at gym-goers
- Customisable in-house meals, ready to ship
- Customer review section
- Prominent, enlarged contact/enquiry call-to-action
- Top navigation bar for desktop, collapsing into a burger/hamburger menu on mobile and tablet breakpoints
- Hero banner and image gallery showcasing healthy meals and food

5. Design and User Experience

5.1 Colour Palette

Colour	Hex Code	Use
Primary	#4D4D4D	Filled buttons, active states, links, app header
Secondary	#46BA9A	Section labels, borders, dividers, outline buttons
Accent	#80BF42	One focal element per screen — hero CTA, key stat, badge
Background	#D9D9D9	Main page background fill (light grey, #F3F2F2 on white screens)
Surfaces	#FAFAFA	Cards, modals, list containers, drawers

Colour	Hex Code	Use
Error	#B62034	Error text, error borders, destructive actions
Success	#268733	Confirmations, positive states, success messages
Warning	#D18A10	Caution states, pending actions, advisory text

Table 2: Daily Diet colour palette (generated using Sookha's Colour Scheme Generator, 2026)

A fresh, health-oriented colour palette was chosen — dark grey paired with teal-green and lime-green accents — to reflect the nutrition and wellness focus of the business.

5.2 Typography

Poppins — a clean, rounded, friendly sans-serif font was chosen to suit a health and wellness brand.

Daily Diet — This is how Poppins looks (sample text in the chosen font)

5.3 Layout and Design Approach

A top navigation bar will be used on desktop, collapsing into a burger/hamburger menu on mobile and tablet breakpoints. The hero banner and image gallery will mainly show healthy meals and food, showcasing the range of meal plans on offer.

5.4 User Experience Considerations

- The first-month discount is shown on the payment/plans page, with the original price struck through and a bold new discounted price shown, for new members only
- Customer reviews are displayed to build trust — higher ratings and scores make visitors more likely to make a purchase
- The contact/enquiry button and font size are enlarged so users can get in touch with any questions or need for further assistance with extreme ease

6. Technical Requirements

- Domain registration: GoDaddy — proposed domain: www.dailydiet.co.za
- Hosting: Cloudflare
- Development editor: Visual Studio Code (VS Code)
- Languages: HTML, CSS, JavaScript
- Note: account login and payment functionality are proposed features; full implementation would require backend/server-side technology beyond the HTML/CSS/JS scope of this module

7. Timeline and Milestones

- Week 1–2: Proposal approved, planning and HTML structure completed (Part 1)
- Week 3–6: CSS styling and responsive design completed (Part 2)
- Week 7–10: JavaScript functionality, SEO, and forms completed; website deployed (Part 3)
- Week 11–12: Testing, refinement, and final launch

8. Budget

Website design pricing is typically categorised by website type (New Perspective Design, 2026). Daily Diet is best suited to the e-commerce website category (from R7,580), due to the large amount of online ordering and shipping of meal plans the site will handle.

- Development (once-off): R7,580 – R20,000 (New Perspective Design, 2026)
- Domain registration (.co.za, annual): R80 – R150 per year (LaunchLlama, 2026)
- Hosting: Cloudflare — free tier, with the domain registered through GoDaddy
- Maintenance (monthly): R3,999 per month — Business Basic Plan (Comfort Digital, 2026), reflecting the added complexity of a subscription-based service

9. Low-Fidelity Wireframes

The following wireframes were created using Figma and represent the rough layout and information hierarchy of two key pages, without final colours, imagery, or styling.

Figure 3: Low-fidelity wireframe — Homepage, mobile/burger menu view (Daily Diet, created in Figma)

Figure 4: Low-fidelity wireframe — About page (Daily Diet, created in Figma)

Appendix: AI Interaction Rules — Claude

1. Hints Only — No Doing the Work: Claude may only assist through hints, guidance, and feedback. Claude must never complete assignment questions, write pseudocode, draw flowcharts, or produce any academic content on Mohamed's behalf, under any circumstance.
2. Attempt First Policy: Mohamed must always attempt every task first before Claude provides assistance. This includes coding errors — Claude may help identify and explain errors, but only after Mohamed has made an attempt. If Mohamed has genuinely attempted a task more than once and is still stuck, Claude is permitted to provide a more detailed hint to help move forward.
3. Document Summaries: Claude is permitted to summarise uploaded documents or study material to help Mohamed understand the content.
4. Helpful Links: Claude may provide links to relevant websites or resources that support Mohamed's learning.
5. Formatting & Presentation: Mohamed may ask Claude to format and present completed work. Claude may clean up formatting, fix spelling and grammar, and present work professionally. Claude must never add new content, change answers, or alter any logic. All academic content remains Mohamed's own. Claude must remind Mohamed to disclose AI formatting use in his “Disclosure of AI Usage in my Assessment” annexure per PDIIIE023.
6. Claude Reference — Every Document: When completing any document, Claude must always include a correctly formatted Harvard-Anglia IIE reference to Claude, including the chat link from that specific conversation.
7. Referencing Disclaimer: Whenever Claude assists with or produces a reference, a disclaimer must be included noting that all references must be verified by Mohamed before submission.
8. Permanent Reference List: Every completed document must include references to the IIE Harvard-Anglia style guide and PDIIIE023.
9. Rules Appendix: When completing any document for Mohamed, Claude must include these rules in full at the end of the document as an appendix titled “AI Interaction Rules — Claude”.
